Jacob Symla Killed on Wednes. Night at International Mine; Inquest at 7 p.m. on Friday

Jacob Symla, 54 years of age, was killed by a rock fall in Room 18, B level, International mine, at about 7.30 p.m. Wednesday. It is reported he was preparing to place a prop in position when the rock came down on his head and back, pinning him and crushing his chest, causing suffocation. His partner was Jim Denholm.

A jury was empanelled on Thursday morning, by Coroner A. M. Morrison, as follows: W. Bell, foreman;

Tom Lloyd, J. Poole, H. L. King, W. Duell, J. K.

The body was viewed at Crow's Nest Unexploded Parlor, and the injuries explained by Dr. Borden, following which the inquest adjourned till 7 p.m. Friday when evidence will be heard.

Deceased was a native of Poland, and came here 24 years ago. He was married and has three children. He died some years ago. There are three or four children of the marriage living here.

The funeral will be held on Saturday at 2 p.m., service at Holy Ghost church.

Local News

Mrs. John Bell left on Tuesday for a holiday in Vancouver.

Mr. and Mrs. Pete Brown are holidaying at Medicine Hat.

Turn to Frank Abousaia's ad. for ladies' wear.

Helen Dibblee is a visitor in Calgary.

Peggy Devine, Laure Antle and Phyllis Burgess are spending a few weeks camping at the Gap.

Mr. and Mrs. Sid Short and family are spending their holidays at Coeur d'Alene.

Mr. and Mrs. James Ford returned from Creston on Saturday and left on Sunday for Waterton Lakes.

Mr. and Mrs. A. B. Westworth and Mrs. Westworth, Jr., motored to the North Fork on Sunday.

J. L. Ludman, representing the "Sunny South" Co., Lethbridge, was a visitor here on Monday for his firm.

Mrs. Davidson and children are visiting relatives for part of the school holidays at Raymond.

Mrs. Ann Danyluk, of Luscar, and her young son Teddy, are visiting John Perry, and son "Bill," of East Coleman.

Mr. and Mrs. W. Dutil and Mrs. W. G. Gate will leave on Sunday for two weeks holiday in Seattle and other points.

To improve his store service, W. Ferby has installed a fine physical display case for meats in his store in East Coleman.

A. Edmunds, of Blairmore, is relieving at the local vendor's store during the holidays of Mr. Davidson, local manager.

Mr. and Mrs. George Morgan and Mr. and Mrs. Evan Morgan, of Blairmore, are holidaying at Vancouver.

Winifred Dunlop entertained her Sunday school class by taking them to the movies, followed by a lawn party at her home.

Mrs. Wm. Bailey and daughter, Miss Jean Bailey, B.A., of Vancouver, are visiting the former's brother, Mr. Chas. W. McKinnon, and Mrs. McKinnon.

Rev. J. T. Dumbas has as his guests this week his brothers, Phil, of Detroit, and Walter, of Toronto, who, accompanied by their wives, are on a motor tour across Canada.

Mr. and Mrs. Chris Rogers, and John and Helen, left by motor on Wednesday morning to visit Mr. Rogers' parents at Arrow Lakes, B.C. They went via Banff.

Albert E. Knowles informs The Journal that Mr. Steele, of High River, has located the larger part of his store on Main Street, which he will open as a drug store and later install a soda fountain.

Mrs. Wm. Burrows is spending a holiday visiting her father, Marshal Laird now living on Vancouver Island. In 1910 he was superintendent of the coke ovens at the International Coal Co.

L. L. Morgan, proprietor of Crow's Nest Pass Motors, was a business visitor in town on Tuesday afternoon. Sales have averaged fairly good this year, considering the delays caused by the automobile workers' strike early in the year, states Mr. Morgan.

Miss Marjorie McLeod, a former high school girl of Coleman, on the staff of the Blackfoot hospital at Glenora for the past three years, sends her renewal subscription to The Journal. It keeps former Colemans in touch with the people they knew when living here.

Golfers from Macleod played against members of the Crow's Nest club at Blairmore on Sunday, in the southern Alberta championship series, home players winning. By winning in this series they qualify to play in the Calgary Herald tournament.

J. L. Lonsbury, in a recent competition of the Rod and Gun Club, won the first and second prizes for the heaviest speckled trout and the heaviest basket. Jim Barclay won the prize for the heaviest mixed basket. The regular outings of the club afford good sport for the members. D. Holly is secretary.

Mrs. W. H. Dryden and young son John and Miss Kitty Gray, of Westville, N.S., are spending two weeks the guests of Mrs. Lily Fraser, Sixth street. Miss Gray was for three years at hand training in the hospital there, and last visited Alberta about eight years ago.

Tickets for the Coronation cake, which is to be drawn for, and was donated by Hunter's Bakery for the benefit of the Girl Guides, are still on sale, and the public is urged to purchase tickets. The Guides do fine for these purposes, and will be the only organization in town for these young people. By all means give them a hand by purchasing a ticket from stores where they are on sale.

St. John Ambulance Association Exams.

Lt. Col. J. H. Snell, director of St. John Ambulance Association, Ottawa, was here on Monday and Tuesday examining teams from McGillivray nine, Thompson's team, of Blairmore, which has the distinction of three brothers, Alfred, Alex, and Tommy McKay, as members; team from Hillcrest and a girls' team from Coleman. The results will not be made known till after Col. Snell's return to Ottawa late in August. International team detailed through members being on holidays.

The competitors were for Dominion trophies, viz: the Montizambert, Ouderde, Tyro and the Gaunt trophy of 1936. The teams were: Thompson's, Archie McCulloch is local president and R. M. Greenhalgh honorary president. McGillivray team included A. McCulloch, A. S. McLint, W. Lonsbury, Joe Simla, Tom Brennan, Hugh Dunlop. Myrtle Johnson is captain of the girls' team. The competitions were held in the Community hall.

MISS POWELL'S RESIGNATION
11141 - 90 Avenue, Edmonton, Alberta, July 10, 1937.

The Board of Trustees, Coleman S.D. No. 1216.
Gentlemen: I hereby tender my resignation to take effect thirty days after the present date.

In certain respects my resignation goes with regret. I feel that it is impossible to continue with the Coleman school board with any measure of dignity or any chance of being as efficient as I should like to be. Since I commenced services with the board there has been constant bickering and quarrelling with respect to the duties of service. This has been largely due to the fact that the janitor, either with or without the authority of the board, has always adopted a domineering and intransigent attitude.

For example, as a matter of strict professional attitude, a teacher desires to participate with the students in certain extra-curricular activities, my opinion sphere being music. Although not obligated by the School Act or the regulations of the Department to teach music, I have been a choral work, for years I have been prepared to sacrifice time and energy in the interests of music. So much so that three years ago I made an application for the position of supervisor of music. I have no complaint to make against the board for appointing me, and they appointed another teacher, Mr. W. G. Moffatt, with whom I found it a pleasure to work. I felt that the appointment had been as the benefit of the pupils of Coleman schools. Nevertheless I went ahead and organized a school orchestra and a chorus which secured honor at the musical festivals. I felt myself impeded and repressed at every move by the janitor, who refused to allow me use of the school in which the students might carry on work. I was to be perturbed at every turn.

This developed an atmosphere which made for unhappiness amongst the members of the staff, for I am well aware that other teachers who had other activities they desired to carry on were likewise frustrated. Although I have no desire whatever to instruct the members of the board as to what are their duties in this regard, it must be apparent that there is such a lack of co-operation and awkward distribution of authority between the janitor and the school principal, etc., that rather than continue the present unhappy relationship, I have accepted another position at a sacrifice salary compared with what I was earning.

I formally register this protest, not with any idea of retaliation, but hoping that it will at least result in such action that the members of Coleman school staff may function with greater efficiency and happiness. This will mean a better type of organization and will enable the boys and girls to secure the full benefit of money spent by the citizens in the operation of the schools.

MAY M. POWELL.

Coleman Homing Society Gains Distinction in Competition With Other Alberta Champion Pigeons

Again Win Western Federation Race —Charles Makin's Bird Makes Marvelous Flight.

Homing pigeons of Coleman club have proved themselves champions in two races recently flown under the auspices of the Western Canada Federation for the championship of the west. A bird owned by F. E. Eyesackers won the race from Waterways, Alberta, covering 507½ miles between daylight and dark with three hours to spare over all competitors. The race took place two weeks ago.

The latest victory is that of a bird owned by Charles Makin, of Coleman. Officials of the federation state the bird made a remarkable flight considering the bush fires that were raging from Lac la Biche to Fort McMurray, with the country dark for over 200 miles with dense smoke. The race was from Fort Chipewyan, and Makin's bird flew, by airline measurement, 550 miles, arriving here the second day after being released, making a velocity of 720½ yards per minute. The secretary of the federation.

tion, G. Jackson, states it was one of the hardest races that the birds have been called on to undertake. W. Webb, of Calgary, was second, and F. Eyesackers again was in the winning class, his bird coming third.

It is about seven years ago that Coleman Homing Society was organized, through the efforts of John Anderson, who returned to Scotland less than two years ago. Formerly in the Scots Guards, Anderson was given the care of some pigeon lofts in England during the war, when carrier pigeons were used quite extensively on the war fronts, and many are the thrilling tales of the exploits of these noble winged messengers. For heroic endurance they are beyond compare, even struggling to their home lofts after being severely crippled.

From stock imported from the old country, a start was made with building up lofts of birds here, and the success of these birds in competition with all other clubs in Alberta is indeed a remarkable tribute to the foundation stock from which these winning birds were developed.

YOU Share in Canada's Greatest Co-Operative Business

LIFE INSURANCE is the greatest co-operative business in Canada. As a policyholder, YOU are associated with more than 3,500,000 other Canadians in this great enterprise.

Every business day last year Life Insurance Companies in Canada distributed, to Canadian policyholders and beneficiaries, over Half a Million Dollars.

Life Insurance enables YOU to provide financial security for yourself and family. It also benefits the country as a whole through the investment of Life Insurance funds in important public enterprises.

Life Insurance dollars give employment to workers throughout the Dominion. Transportation facilities are extended, highways built, streets paved, schools erected, water, sewage and other necessary works constructed. Life Insurance dollars help to finance the farmer, and bring business to the general store and country merchant.

In the past five years of business depression, Canadian policyholders and beneficiaries received over Eight Hundred Million Dollars in payments from their Life Insurance funds. Life Insurance Companies have fulfilled every obligation one hundred cents on the dollar.

As a policyholder, YOU can take justifiable pride in sharing in this, the greatest co-operative business in Canada.

Essential Government

Since the onslaught of the now famous and much publicized depression one has heard occasionally the suggestion that municipal government should be abandoned, the proposal usually being advanced in the interests of economy. As the depression deepened and its baneful effects became more apparent this proposal was heard more frequently in the prairie provinces—the hardest hit section of the Dominion.

The suggestion has emanated from various sources and has cropped up now and again here and there, but fortunately the idea does not appear to have gained much ground, nor has much weight been given to the suggestion in any influential quarters. It has not received support by those who are able to seriously influence public consciousness.

It is true that the cost of government in this country is too high. There is no gainsaying the statement that public expenditures for services rendered are excessive and should be curtailed but, even considering the matter solely from an economic viewpoint, it is doubtful whether any saving to the pockets of the people would be effected by the abolition of municipal administration, either urban or rural. On the contrary, there are very good reasons for believing that such a move would result in an increase in the cost of government.

If there is any form of government which should not be impeded, and still less abandoned, it is local self-government.

There are services rendered by the municipality, urban or rural, which could not be rendered either as effectively or as economically by a more remote authority. It is not necessary to enumerate those services. Any person can at once think of a number of them. They are services which the people would not be content to do without and would not wish to have performed as privately-operated enterprises. In fact, they are now being rendered on a community basis because, for more reasons than one, people have come to the conclusion that such services can be provided more efficiently and more cheaply as municipal enterprises.

Moreover the nature of these services is such that the conditions under which they are provided have to be suitable to local conditions and local requirements. Under long range administration they would inevitably be expected to conform to a pattern which would render them valueless in some localities and of little use in others. Further, when changes in form of service were required because of seasonal or local conditions, the necessary changes could not and would not be made effective in time to be of any value if appeals had to be made, either to provincial or Dominion capitals.

To offset this handicap of inaccessibility it would be necessary for the central authority to establish and locate officials in every small unit throughout the country and they would have to be clothed with sufficient authority to make rules and regulations to meet changing local conditions, involving the establishment of a regular army of inspectors and administrators who would have no direct responsibility to the people they served and would not be responsive to local demands. Such a system would not only tend to inefficiency but would inevitably be expensive.

But apart from the questions of economy and efficiency involved in such a proposal there is an even more potent reason, not only for the retention but for the strengthening of local self-government.

Local self-government has often been referred to as the keystone in the arch of democratic government and its removal would weaken the entire structure of democratic government. In this direction it would have a far more serious effect than at first blush might be supposed.

Municipal government is the government closest to the people it serves and because of this it is most responsive to the wishes of the people. It is the kindergarten of all democratic governments and more often than not is the training school for service in the provincial and Dominion arenas. In the local councils the members learn by experience that they must carry out the wishes of the majority if they are to continue in office and yet at the same time afford some protection for the interests of minority groups—the foundation of all democratic rule.

It has not and cannot be demonstrated that abandonment of municipal government would effect one iota of saving to the taxpayers, nor can it be shown that the services rendered by the municipal government could be more efficiently rendered by other and less responsive authorities.

The loss of local self-government would be a serious thing for the people and might well be the beginning of the loss of all self-government.

Are Flourishing Again

Henry V. Founded Boy Players Of London In 1419

Not long before he died, King George V. was instrumental in reviving the famous Boy Players of the City of London, and during this coronation season these sweet-voiced children, clad in ankle-length Elizabethan surcoats, black velvet knee-breeches and white-plumed hats, have taken part in several functions. Originally founded in 1419 by Henry V., the Boy Players were the only actors admitted to the city, now the financial district. They laid the foundations of English drama, reaching their highest skill in Elizabethan times, when many of them created the great Shakespearean heroes for the first time on any stage. Their work ended in 1609, but now they have begun to flourish again. Not only do the boys sing madrigals, but they appear on the stage in the Old Vic and in opera at Sadlers Wells and are also in demand for pageants. —*Charlottetown Guardian.*

The word quarantine comes from the Latin *quarantena*, or 40, the original number of days in a quarantine.

ITCHING
TORTURE STOPPED In A Minute!
For quick relief from the itching, burning, stinging, and other skin eruptions, apply Dr. D.D.D. Prescription. It gives instant relief to the most intense itching, burning, stinging, and other skin eruptions. A little trial bottle, at 10¢, gives you the full story.

Physical Training For Youths

Lord Baden-Powell Opposes It For Several Reasons

Lord Baden-Powell, the Chief Scout, attacked gymnastic training for youths.

"There is no reason for gymnastics as far as I can see," he declared at a dinner of the 100 Club at Grosvenor House.

"The finest men I have ever met had no gymnastics but they had plain food of a healthy kind and took plenty of outdoor exercise."

We are now trying to inflict physical training on poor boys, not very well fed.

"It is not, I think, quite the right way of developing a strong healthy nation," he added, "because no two boys are alike in physical ability and a great many are not fit for the work given to a whole squad." —*Overseas Daily Mail.*

A Gentle Hint

Two Scotsmen were watching a football game. One had a bottle, the other only a thirst. The bottleman was talking very loudly about his knowledge of the game and what a fine player he was himself. During the conversation he helped himself liberally to the contents of his bottle, whereupon the thirsty one said, "Well, I notice you're a fine dribbler, but you're not a good at passing."

Desert animals and birds, as well as humans, often quench their thirst by tapping barrel cactus, natural water barrels.

Newfoundland Airport

Modern Methods Waging A Successful Battle With Nature

A group of almost 1,000 sun-browned men and \$500,000 in machinery are waging a successful battle with nature, as they have a great airport out of virgin timberland in Newfoundland's bid for trans-Atlantic air-route recognition.

Under direction of resident engineer E. B. Woodruff, of Toronto, one of the builders of St. John's airport outside Montreal, shifts of men and machines work 24 hours a day; cutting, clearing, ripping, leveling and grading over an 860-acre gash in the dense timber country, 213 miles northwest of St. John's by rail, and about 130 miles from the capital by plane.

A mile to the east, three towers are rising from another man-made break in the forest where a wireless station with the most powerful and modern equipment available will guide huge planes on their trans-oceanic dashes.

More than 20 tractors, a giant stone crusher, Diesel-powered shovels, ground-ripper, rollers, railways, engines, steamrollers, conveyors, graders and trucks are working continuously.

Four runways, surfaced with an asphalt-like substance, are planned. No. 3 runway will be 4,500 feet long and 1,200 feet wide while the other three will each be 4,500 feet in length with a breadth of 600 feet.

Work has suddenly been speeded up on No. 1 runway with a strip 250 feet wide and running the entire length now completely graded and ready to receive its first plane, although the hard surfacing is yet to come.

The concentration of work on the one runway is taken here as evidence supporting persistent rumors a giant wheel-equipped plane is undergoing tests in England in preparation for a trip to the new airport this summer. It is predicted the new plane, with a cruising speed of 200 miles an hour, will make the dash in 10 hours.

No Liquor Advertising

Broadcasting Corporation Is Not Contemplating Acceptance Of Programs

Major W. E. Goldstone Murray, general manager of the Canadian Broadcasting Corporation, has issued the following statement:

In view of current misunderstanding and misrepresentation, the Canadian Broadcasting Corporation announces that the acceptance of programs sponsored for the sale of spirits, wine or beer is not contemplated for any of the stations of the corporation or any of its networks.

As, however, the Canadian Broadcasting Corporation is responsible for the control of all broadcasting in Canada consideration is being given to revised regulations.

In this connection special attention is being paid to the problem of the sponsorship of wine and beer programs in the province of Quebec by private stations where such programs are allowed by the laws of Quebec and by the regulations of the old radio commission and have been broadcast by some private broadcasting stations for a number of years.

Actor Had Hard Struggle

Sir Cedric Hardwicke Worked Hard To Attain Success

Sir Cedric Hardwicke, who has returned to London after a long stay in Hollywood had a hard struggle in his young days on the stage.

For a long time his parents refused to let him be trained, and even when he got a walking-on part at the Lyceum at the age of seventeen, he was told he was no good.

He was so discouraged by this and other experiences that when he returned to civilian life after the war he decided to take up another career. A chance meeting with Sir Barry Jackson, however, made him change his mind.

Sir Cedric claims to have been the last British officer to leave France after the war. It was his duty to haul down the flag at St. Pol in 1921, and he still keeps the flag in his property basket.

He was also one of the officers to mount guard over the body of the Unknown Warrior before it was brought to England.—*News of the World.*

A high school girl, seated next to a famous astronomer at a dinner party, struck up a conversation with him by asking, "What do you do in life?" He explained, "I study astronomy." "Dear me," said the girl, "I finished astronomy last year."

In an accident the only thing better than presence of mind is absence of body.

Shipyards of Finland are operating 24 hours a day.

THE NEW PALESTINE

The result of the findings of the Royal Palestine Commission, headed by Lord Peel, calls for the dividing of Palestine into three parts. The heavily shaded area on the seacoast represents the area allotted for the realization of a Jewish national home, while the proposed British-administered neutral zone, including Jerusalem, is indicated by the lesser shaded part. The remainder, or two-thirds of the country, is reserved for the suggested Moslem sovereign state.

SELECTED RECIPES

FRUIT SALAD DRESSING

1 egg
1 tablespoon sugar
2 tablespoons Crown Brand Corn Syrup
½ tablespoon Benson's Corn Starch
½ tablespoon mustard
½ teaspoon salt
½ cup pineapple juice
½ cup orange juice
½ cup cider vinegar
½ cup cream, whipped
Method: Break the egg into top of double boiler; add sugar, Crown Brand Corn Syrup, Benson's Corn Starch, mustard and salt. Beat all vigorously until there are no lumps in the mixture. Now add the fruit juices and cook in top of the double boiler until the mixture begins to thicken. Stir in the vinegar and again cook for 10 minutes. Strain, and when cold fold in the stiffly whipped cream. This makes a delicious salad dressing for all fruit salads.

Interested In Children

Queen Mary Attends Garden Party In Aid Of Invalids

Since the accession of the King and Queen it has been noticed that Queen Mary has often taken over the little Princesses at public functions. On June 12 Her Majesty went to a children's garden party held in the beautiful grounds of Lambeth Palace, where young people were enjoying the fun of the fair with swings, roundabouts and donkey rides. Queen Mary stood on the broad terrace to receive purses from schoolchildren from all over the country and the children of members of the committee who were organizing the garden party. Queen Mary takes a great personal interest in the Invalid Children's Aid Association, for whom the garden party is given. In the past she has seen prisoners from Sandringham for the little patients, and after banquets at Buckingham Palace, the sweets on the tables have been sent to them at her instruction.

The Thing That Counts

Not Fortune A Man Has But The Way It Is Used

A dispatch from Calcutta claims that the Nizam Hyderabad is richer than John D. Rockefeller ever was.

The Nizam is reputed to have a stack of gold ingots and a collection of gems worth \$500,000,000.

John D. Rockefeller's fortune was estimated at one time at a billion dollars, but Mr. Rockefeller never had \$500,000,000 in bullion and gems.

The fortune he amassed remained in circulation and kept the wheels of industries upon which tens of thousands of other people depended for a living, turning.

The important thing is not the amount of money, a man has, but the use to which he puts it.—*Detroit Free Press.*

A new type of brick retort makes smokeless fuel, gasoline, and heavy oils from any suitable kind of coal.

No Onions From Spain

One Reason British Market Has Opened To Canada

An insignificantly placed item in the news the other day tells of onions being exported from Canada to England for the first time during the last fiscal year ending in March. This is no doubt a cause for congratulating the Department of Trade and Commerce, even though the exporters might have wished the total to have been larger.

Why has the market so suddenly been opened to Canada? In the absence of further details it may not be far wrong to guess that Canadian onion-growers can thank the war. The British housewife for years has been accustomed to ask for "Spanish onions" at the greengrocer's. And in addition a familiar autumn sight in and around London, are swarthy, foreign-looking men, shouldering curious strings of onions, knocking at suburban doors, and in broken English offering their wares for sale. Those foreigners are the sturdy Basques, who venture abroad regularly after the onion harvest to trade a bit and see a little bit more of the world than their own hardy country.

There will hardly be any picturesque onion-selling Basques in England this autumn. The only Basques making the journey over to England this year are the hundreds of little refugee children who have lost home parents and all their little world in the horror of a modern civil war.

But Canada for the first time on record sells onions to the United Kingdom.

A Real Grievance

Messenger Boys Had Good Reason For Apparent Courtesy

A pretty young lady we know found herself upbraid bound in an office-building elevator the other day, in the company of a Postal Telegraph messenger boy. Not only did the boy keep his hat off during the trip, but he held it over his heart. This touched the young lady deeply, but she was more astonished than touched to meet another Postal Telegraph boy on her trip down, also with his cap clasped to his heart. She finally whipped up enough courage to ask him if this was some sort of company rule. "Listen, sister," the lad said, passionately, and with a marked degree of courtesy, "what would you do if you had to wear one of these?" Removing the cap from his breast, he pointed to a badge, almost the size of a saucer, that said, in tremendous letters, "ASK ME about the new twenty-five word message."

Oat Production

Oats rank second only to wheat on the basis of world production and, although the crop may be grown under widely different soil and climatic conditions, about 75 per cent. of the world crop of oats is produced in six countries—namely, Canada, the United Kingdom, the United States, Germany, France, and Russia.

The term "call money" is applied to money which is loaned on condition that the loan be repaid at any time the person making the loan calls for the money.

Have Better Safety Record

Deaf Drivers More Careful Than Those With Normal Hearing

There is a belief commonly held that persons licensed to drive automobiles should be physically sound in every way. Experience, however, shows that a physical handicap, if it is not too serious, is actually a safety factor.

The Ontario Association for the Deaf in a recent statement pointed out that deaf, and hard-of-hearing drivers, have a better record of safety than those with normal hearing. During the past eight years only five deaf drivers were involved in accidents, none of which ended fatally, or resulted in serious injury. In three of the cases the good-hearing drivers were decreed to be at fault, and the other two cases, were due to speeding. The reason for this, of course, is that the deaf driver is unable to rely on his ears to help him at the wheel. Normal drivers in this respect listen for oncoming traffic and other sounds, whereas the driver with impaired hearing is ever on the alert with his eyes as it is upon his sight that he depends more than any other sense. He looks for cars, pedestrians and signals with more intentness.—*St. Thomas Times-Journal.*

Versatile Business Man

Merchant In Ontario Town Has Been Blind For Years

Blindness is no handicap to Orville Frayne, called the most versatile business man in Forest, Ontario. Orville, who is "always 21", lost his eyesight through illness when he was 21.

He operates a tobacco and soft drink shop, where he sells rubber mats, bead work and leather belts he himself makes. He also sells and buys livestock, trades in wool, shears sheep, and keeps for rent, jacks to raise buildings. Besides, he is an expert euchre player. He can read both Braille and New York point, and it is with these systems of raised characters that he reads his cards. Other players announce the cards they lead when playing with him.

"I can remember what everybody held, sometimes days afterward," Frayne says.

His parents are farmers and he frequently visits them and helps with the farm work. Being blind teaches a person to concentrate, and this often gives him an edge over persons in full possession of their sight, he claims.

New Bone-Setting Formula

Adjustable Brace Allows Animals To Walk On Broken Leg

A new bone-setting formula, expected to save the lives of thousands of animals heretofore destroyed because they wouldn't keep off broken legs, was described to the Eastern States Veterinary Association by Dr. Otto Stader, of Ardmore, Pa.

Small aluminum pins are put into each side of a broken bone from an adjustable brace. This permits a dog to walk while the break is healing.

It is dissatisfaction that is our salvation. We weren't meant to be contented. Nothing happens nor accomplishments lie that way.

And Far Handier Than Older Ways!!!

Here is the most useful waxed tissue package you've ever seen.

This new pack contains 45 sheets of silver waxed Tissue. Through the top of the pack is a metal eyelet for hanging on the wall. Inside, the tissue is held in an ingenious grip so that you can withdraw one sheet at a time by simply reaching out with one hand.

"Presto-Pack" thus becomes the handiest of all kitchen aids. You will wonder how you ever managed without it.

Million Lives Lost As Price Of One Year's Civil War In Spain

Salamanca, Spain.—The price of one year for Spain's civil war, 1,000,000 lives of men, women and children.

The figure is an approximation for the toll was levied in devious un-audited ways—collected in the heat of battle, checked, off against pocket walls by a firing squad or marked up to the account of artillery shells and aerial bombs.

Generalissimo Francisco Franco, leader of Spain's insurgents, proclaimed it a "year of triumph" and ordered all communications and public documents for the next 12 months to be dated as the "second year of triumph."

Other "years of triumph" will follow, according to the insurgent view. Starting Friday, all of insurgent-held Spain took on a festive spirit in celebration of the close of one year of conflict. From some pan American country, and the efforts being made in the United States to establish legislation similar to that in England, creating an academy of public affairs to train diplomats and civil servants.

His proclamation commemorated those of his following who were lost in the year's campaign to overthrow the Madrid-Valencia government and dedicated their sacrifice to "the new era of the future."

The future... an old Spanish proverb says that revolution in Spain always runs through a cycle of seven years. If that proves true, this war has at least another year to run, for it was five years or so in the making.

May Become Headquarters

Winnipeg In Favored Position For Operating Air Service

Winnipeg—Because of its favored position in the centre of the Dominion, Winnipeg may become the operating headquarters of Trans-Canada Airlines. Philip G. Johnson, vice-president, said here. Final decision will not be made until the trans-continental service is officially opened.

Operation of the trans-Canada air service will require at least 20 pilots and probably 40 co-pilots are used, Johnson said. Twice that number will be required if two, one-hour, round-trip flights a day are inaugurated.

Foreign Secretary Eden In Defence Of Britain's Non-Intervention Plan

London.—Foreign Secretary Eden warned that Europe would approach the "abyss, should non-intervention in Spain collapse. If Great Britain's proposals to restore complete non-intervention control should fail, he added, "Europe will enter on a new and more perilous phase."

Defending his compromise plan for Europe's neutrality, Eden told the House of Commons that "the governments of Europe know that if non-intervention breaks down, the risks of European conflict are inevitably increased."

The crux of the debate was the Labor party's opposition to granting "limited" belligerent rights to the Spanish combatants. Labor leader Clement Attlee charged Eden had "surrendered to the Fascist powers" by "submitting to a crude and obvious attempt" by Italy and Germany "to weigh the scales against the Spanish government."

The debate ended without a vote. Attlee called the plan "unjust, ill-conceived and dangerous."

Europe faced a definite alternative, Eden answered, either that the proposals "fall altogether or that belligerent rights will be granted and foreigners will be withdrawn" from Spain.

"If they (the proposals) fail—and let us make no mistake about this—Europe will enter a new and more perilous phase," Eden declared. Sir Archibald Sinclair, leader of the opposition Liberals, supported Eden.

Attlee argued that Eden was endeavoring to "reconcile the irreconcilable," contending the Fascist nations were making a mere "pretence of neutrality."

"There has never been an honest intention to carry out non-intervention," he declared. "All the time you have had Fascist dictators laughing at the whole subject and laughing at this country."

The foreign secretary showed anger that the opposition demanded de-

Pan Pacific Conference

Women Gather At Coast To Discuss Peace Questions

Vancouver.—Two prime ministers sent greetings to the fourth triennial conference of the Pan Pacific Women's Association meeting here to discuss "practical ways and means of promoting peace."

They were Rt. Hon. W. L. Mackenzie King of Canada and Dr. Earle Page, acting prime minister of Australia. The premier of New South Wales also sent a cabled message of greeting.

Mrs. Roberta Lawson, of Tulsa, Okla., president of the Federated Women's Clubs of the United States, discussed the work of the American women's clubs, mentioning the \$1,000 fellowship given yearly to a student from some pan American country, and the efforts being made in the United States to establish legislation similar to that in England, creating an academy of public affairs to train diplomats and civil servants.

Help For Young Artist

Lady Tweedsmuir Pays Part Of Expenses For Art Course

Drumheller, Alta.—Margaret Shelton, young artist from Rosedale, will attend the Banff summer school for art, part of her expenses paid by Her Excellency, Lady Tweedsmuir, wife of Canada's governor-general.

During Her Excellency's visit here, Miss Shelton presented Lady Tweedsmuir with one of her water colors. Later the Rosedale girl was a guest at the vice-regal train and arrangements were then made for the summer art course.

Extract Oil From Coal

London.—Lord Mottistone moved in the house of lords that plants be established to extract oil from coal. In the interests of national defense, the government accepted the motion, which the house approved. Lord Mottistone said such plants should be established in Durham and South Wales where they would be a factor in reducing unemployment in those distressed areas.

Compromise Plan

For Control For Arms Shipment In Spanish Civil War

London.—Foreign Secretary Eden presented to the non-intervention committee. Great Britain's compromise plan for re-establishment of control of arms shipments and foreign volunteers in the Spanish civil war.

He suggested abolition of the naval patrol and substitution of a system of observers to inspect incoming cargoes at every Spanish port.

Frontier control along the Franco-Spanish and Portuguese-Spanish borders would be restored.

Limited belligerent rights would be extended to both sides in the Spanish conflict by all the 27 nations in the non-intervention committee.

Non-members of the committee would be asked to co-operate, and foreign volunteers would be withdrawn from both armies in Spain.

Eden's note said: "It is admittedly a compromise between varying points of view; it can only be successful if it is accepted by the governments concerned in a spirit of compromise. All the nations represented on the committee have repeatedly expressed the view that they wish non-intervention in the Spanish conflict to continue. They now have the opportunity to give that wish practical effect."

General Franco had asked to be recognized as a belligerent, a status which would recognize his regime as having limited rights of government within Spain.

Germany and Italy had withdrawn from the naval patrol and objected to France and Great Britain continuing a patrol alone, alleging such a situation might be unfair to Franco and favor the Spanish government.

"Unless a greater spirit of international co-operation is evident than has been achieved in the past, this scheme will fail and the nations of Europe will be faced with a new and infinitely more dangerous situation," Eden's note to the non-intervention committee asserted.

Royal Visit To Wales

The King And Queen Talk To People In Depressed Areas

Cardiff.—The king and queen saw some of the most depressed areas in Wales as they motored through small villages between Cardiff and Swansea.

The route was lined with people—mostly unemployed—who vociferously welcomed their majesties. The king asked numerous questions about working conditions and unemployment. His conversations with unemployed men and women recalled the Duke of Windsor's pre-abdication trip through south Wales.

Thousands of Welshmen along the route from Newport to Cardiff cheered their majesties as they passed in an open car on their first visit to Wales since the coronation.

Army Strength Boosted

London.—The territorial army increased by 16,164 men between July 1, 1936 and the same date this year, authorities announced. Effective strength including officers, non-commissioned officers and enlisted men was 155,990 July 1 this year, compared with 138,826 in 1936.

Build Planes At Fort William

Fort William, Ont.—Production of planes at the Canadian Car and Foundry Company plant here, will be started soon, Mayor R. Hardman stated. Initial work will involve manufacture of four planes.

HAS DIFFICULT PROBLEM

Although the Palestine Royal Commission's suggestion that Palestine should be divided into three to stop the deep-seated antipathies of the Jews and Arabs, is considered the only solution, Sir Arthur Wauchope, above, British High Commissioner in Palestine, expects the extremists on both sides will cause trouble before the situation is settled amicably.

North China Crisis

Japanese See Communist Element As New Bogey

Tokyo.—General Kikuro Inouye, president of the powerful Army and Navy Reservist Association, warned the organization's 3,000,000 members to be ready to serve the empire against China.

His warning came after Japanese despatches from China had reported leaders of the Chinese Communist army had offered to settle their long-time differences with Chinese Premier Chiang Kai-Shek because of the present North China crisis and join with him to fight Japan.

"The crisis has exploded in north China," Inouye told his followers in a proclamation.

"Future developments are unpredictable but we must be prepared for the worst in order to preserve the empire."

"We do not wish to fight China, but we must at this juncture, lay the foundations for permanent peace in the Far East. We must eradicate the roots of the present evil and redress recent Chinese insults to Japan."

The Communist force, 60,000 strong, was said to be in Shensi province, the eastern border of which is some 200 miles west of the scene of present Sino-Japanese hostilities.

New War Weapon

New Type Of Shell Cuts Through Barb Wire

Ottawa.—Plans for a new type of shell for heavy guns were turned over to the national defence department by Capt. J. R. Bowen, of Toronto, a twin brother of Lieutenant-Governor J. C. Bowen of Alberta.

Capt. Bowen, a recruiting officer in Ottawa during the Great War, claimed his shell was designed particularly to cut through barbed wire. He said it was equipped with knives released after it leaves the gun muzzle. He has been working on the plans since war years, one set being destroyed by fire in Ottawa in December, 1917. They were turned over to the department without remuneration.

QUEEN MARY VISITS OXFORD

Her Majesty Queen Mary, in the robes of a Doctor of Civil Law, walks in procession with Viscount Halifax, chairman of the Oxford University, before performing the ceremony of the laying of the foundation stone of the Bodleian Library extension.

Japanese Troops Are Speeding Towards North China Zone

Peiping.—One hundred thousand seasoned Japanese troops were reported speeding toward the troubled North China zone in a commandeered fleet of 31 merchant vessels to back up drastic alleged Japanese demands for establishment of a new independent state, dominated by Tokyo, in Chinese territory.

Authoritative Chinese sources said the new demands were as follows:

1. Joining northern and eastern Hopeh province with Chahar to form an independent state with its capital at Tientsin.

2. Granting of the Chinese port of Tangku to Japan for establishment of a naval base. Tangku is an important Gulf of Chihli port a few miles southeast of Tientsin.

3. Demilitarization of the Peiping zone.

4. Establishment of a Japanese garrison at Peiping "for the protection of Japanese residents."

5. Re-imbursement by the new independent state for the cost of Japan's mobilization in the current North China crisis.

Official confirmation of the demands was lacking, although government spokesmen said they all were contained in the plan elaborated in 1935 by Lieut.-Gen. Kenji Doihara, former inspector-general of the Japanese Kwantung (mainland) army.

Despatches indicating troops of the Central Chinese regime, thus far not involved, were moving north to meet the Japanese reached high foreign officials.

"More than one" of Nanjing's German-trained divisions was said to have reached the vicinity of Peiping, 90 miles southwest of Peiping by rail.

This was received by northern Chinese as the first trustworthy evidence that forces belonging to Nanking Generalissimo Chiang Kai-Shek were coming north to oppose what the Chinese say is Japan's purpose to sever the northern provinces from the rest of China.

Tokyo.—Japanese military authorities warned the nation that preservation of peace in China was becoming hopeless.

Official sources said the situation in the vicinity of Peiping was more precarious than at any time since Japanese and Chinese forces first clashed there 10 days ago.

They said they feared an outbreak of hostilities at any moment.

Despatches from Peiping said peace talks had failed. Official reports charged strong anti-Japanese sentiment in the Chinese 29th army defending Peiping and recounted stories of attacks on Japanese citizens.

Further Economies Ordered

Germany Tightens Regulations To Conserve Raw Material Supplies

Berlin.—Moves to conserve Germany's raw material supplies were effected when newspapers and periodicals were further restricted in use of paper, while equipment of horse-drawn vehicles with pneumatic tires are forbidden.

Newspapers will henceforth have to state their 30-day paper needs before the 10th of each month.

Military Medal For Pilot

Paris.—The flying skill of Sergeant Jean Paulhan, who plunged his military aeroplane into the Seine to avoid injuring spectators of the Bastille day air manoeuvres when his motor failed, won him the military medal. The pilot was rescued and brought to shore by an unidentified swimmer.

Authority Withdrawn

Puss Moth Airplanes Not Allowed To Carry Passengers

Ottawa.—Hon. C. D. Howe, minister of transport, announced authority for the use of Puss Moth airplanes for carrying passengers for hire in Canada had been withdrawn.

The minister's decision followed recommendation of the board of inquiry into the plane crash June 21 at St. Mary's, Ont., in which Pilot A. D. Leavens, A. W. Ogden and C. M. Sockett, Toronto, were killed.

Would Test Drivers

London, Ont.—Ontario legislation compelling all motorists to undergo physical and mental examinations each year before receiving driving permits may be requested by the Police Association of Ontario, which considered the proposal.

Program Formulated For Rendering Aid To Drouth Stricken Areas

Ottawa.—A broad program not only continuing relief for drouth-stricken western farmers but of salvaging the livestock and making provisions for future disasters was agreed upon by the government in cabinet council. Hon. J. G. Gardiner, minister of agriculture, back from a personal study of the prairie problem, laid his recommendations before council and obtained approval for his relief program.

Relief for farmers themselves and salvaging of the livestock will be carried out on the same basis of last year, with the provinces and railroads co-operating, but a new feature was introduced involving the reclamation for grazing of large areas of once profitable ranch country now virtually deserted.

In brief, the program is as follows:

Free freight carriage on livestock shipped out of the dry areas to grazing lands within the prairie provinces, providing the owner retains his title to the stock, the provinces and railroads each contributing one-third.

The government to provide feed and fodder for the maintenance of such livestock as it agrees should be kept in the dry areas for breeding and milking purposes.

Assistance in processing in abattoirs of such stock as conditions indicate should be killed, this on the same basis as last year.

The Dominion government will pay the one-way fare of any buyer from outside the drouth area entering to buy livestock, providing he buys from the original owner and takes the stock to a feeding area and feeds them three months. In addition, the Dominion will pay half the freight costs on such shipments.

The department of agriculture is arranging to establish, within the next three or four months, assembly areas and marketing points at which farmers may take the livestock to be classified and marketed with efficiency.

ency. These areas will be near water and pasture or fodder.

Water conservation and establishment of dugouts and dams, initiated under the Prairie Farm Rehabilitation Act, will be proceeded with. It is hoped, the minister said, by this method provision will be made to sustain livestock in future years under conditions similar to those existing at the present time.

In co-operation with the provinces, particularly in Alberta and Saskatchewan, ranching areas once populous but now largely deserted, will be taken over under lease and fenced off by the agriculture department. They will be kept free of grazing so that grass may grow and the areas become rehabilitated to provide grazing lands for the future. Water will be provided by dams and dugout construction.

Agreement will be obtained from the provinces to keep settlers off these areas and the few remaining settlers will be moved to other home sites. This program will provide considerable work for the unemployed, the minister said.

Agreement with the provinces concerned have some plans for large-scale moving of families out of affected areas, the minister said the Dominion government was not taking part in that program. He expressed a belief that such drouth areas would be restored eventually to production.

For the past year the disaster of those in the drouth areas has been looked upon by the federal government as a national emergency, and, as such, the government has paid 100 per cent. on loans to these areas. This policy was being continued, the minister said.

"On the whole," Mr. Gardiner said, "the situation in the drouth areas is worse than it was last year. The areas are no larger but the loss is more complete. In a considerable part of the area nothing has grown since spring."

London To Capetown

Man Wore Out 22 Pairs of Shoes
On Long Walk

James Scott, 55-years-old ex-Army sergeant, who, after a walk from London lasting three years and eight months, arrived at the City Hall, Capetown, five minutes ahead of his schedule, gave details of his adventure.

Despite the hardships experienced on his wanderings he had a twinkle in his eye when he talked of it. "Ay, there have been lean enough times," he said. "When the amputation of the Scottish bus companies resulted in my losing my job I decided that rather than go on the dole I would walk to South Africa."

Sun-tanned and healthy, Scott did not have a day's illness. And when he arrived he was wearing his 23rd pair of boots.

"The worst stretch was the 200 miles along the Mediterranean coastline of the Libyan Desert," he recalled.

"It was hard going—not sand but mile after mile of tiny pebbles that made me weary and wore my feet raw. It took five days."

"Nearly all the officials in every country whom I met gave me encouragement."

"Outside Rome I sought shelter in a stable during a storm, and discovered that I had been sleeping with Mussolini's favorite horses on his estate."

"I started the journey with £10, but was only occasionally hungry."

"The worst stretch, from the catering point of view, was the 400 miles trip over the desert from the Assuan Dam to Wadi Halfa on a diet of dates and water for 15 days."

"When I got to Wadi on the Sudanese frontier they refused to let me through, and it meant a return trek over the same ground."

Scott hopes to get a job in Capetown and return to London by sea.

The distance from London to Capetown as the crow flies is 6,000 miles.

Powerful X-Ray Machine

Will Be Used In Boston Hospital
For Treating Cancer

A new 1,000,000-volt X-ray machine for the treatment of cancer, the most powerful ever built, has been introduced at Huntington Memorial Hospital, Boston.

Dr. Richard Dresser of the hospital staff said 2,000 grains of radium costing \$60,000—if it could be procured—would be required to produce gamma rays having the effectiveness of this new X-ray generator.

The generator, standing 15 feet high, is kept in an underground, lead-insulated room where patients may be treated in perfect safety.

It is known as the electrostatic generator, and was designed by Drs. John G. Trump and Robert J. Van de Graaf of Massachusetts Institute of Technology.

Buoy Made Long Trip

Cast Into Arctic Sea It Drifted To
French Coast

A buoy cast into the Laptev Sea (in the Arctic) by the ice-breaker Sibirskiyok during her voyage from Archangel to the Pacific in 1932 has been picked up in the Bay of Biscay near the French coast, and sent to the All-Union Arctic Institute at Leningrad. It is estimated that the buoy must have travelled more than 7,800 miles and Professor V. Y. Wies is of the opinion that it drifted from the Laptev Sea to the Polar basin north of Franz Josef Land, then down the West Greenland current to the southernmost promontory of Greenland before reaching the Bay of Biscay.—London Times

Earned His Money

Water Diviner Was Able To Produce
Adequate Supply

Alexander Wilkinson, a diver, has earned the reputation of a "modern Moses" in Dunganon, Irish Free State. For years Dunganon rural council has sought to find a domestic water supply for the village of Dunganon. On the advice of water diviners they blasted 40 feet of bed rock, without finding a trickle. Then Wilkinson appeared, and offered to produce an adequate supply for £40. Within a fortnight, Drummucks' water supply problem was solved.

Two Things To Learn

An inveterate young talker came to Soracates and told him that he desired to learn botany.

After a lengthy conversation, in which the young man did most of the talking, the great teacher said, "I must charge you a double fee."

"But why," asked the young man. "Because," answered Soracates, "I must teach you two sciences; the one to hold your tongue and the other how to speak."—Christian Science Monitor.

ARTICLE No. 2

WHAT IS CANCER?

Cancer is a disease due to disorders of the cells of one's body. Everyone knows that the human body is composed of cells, hundreds of millions of them. The individual cell is extremely minute. A body cell were magnified 500 times it would appear to be about the size of a small pin's head.

Each of these cells, so infinitely small, is a living thing. It is composed of a semi-solid material, has a sort of wall and a nucleus in its midst. The nucleus is the most important part of the cell. Each individual cell is able to move; it is able to gain nourishment from its surroundings. It is able to breathe. What is still more remarkable, each and every one of the hundreds of millions of cells in our bodies is able to reproduce itself.

Reproduction of cells takes place by division. In the division of a cell the operation begins in the nucleus. The nucleus divides in two and, in the course of from three to twelve hours, the entire cell divides. In their subsequent life the divisions of the cell mature. When matured, they are again just as the parent cell divided. What is the purpose of this division of cells? The purpose is growth. It is by division of cells that the various organs of the body develop and grow. It is in this way that the development of bones and teeth, of the skin and brain, of the heart and nerves and of all parts of one's body.

A cancer begins as a single cell. At first it looks exactly like one of the normal cells just described. It takes an expert with the microscope to detect any difference between a cancer cell and a normal cell. The cancer cell, like the normal cell, divides for the purpose of growth. So far, the cancer cell and the normal cell are almost alike. The growth is manifested by division of the normal cell is a regular controlled process. There is certainly some force in one's body which controls ordinary cell division. When necessary, it stops it when division is unnecessary. This control in healthy persons is maintained throughout life.

The growth of a cancer cell is uncontrolled. Its growth is riotous. A cancer cell is a sort of bolshevik. Instead of dividing like the normal cell, in the course of from three to twelve hours, there may be many divisions of the cancer cell in that period. It is this rapid, uncontrolled division of the cell that constitutes the main difference between normal growth and cancer growth. It is the lever of control in cell growth were discovered we might therein have a solution of the cancer problem. Some investigators have come pretty close to the solution. One day it will be.

Article No. 3 will be "Cause of Cancer."

Trying Something Different

Londoners Going From England To
Cape Town In Speed Boat

Two Londoners have thought of something that hasn't been done before—something a little safer than shooting Niagara Falls in a barrel boat risky enough. In a 75-foot speed boat they hope to make the water journey from Southampton to Cape Town, South Africa, in 25 days. Commander C. O. Luxmoor, R. N., 36 is pilot, and benomocled Robert Stewart, 26, is engineer. They hope to average 300 miles a day and their course lies along the French coast, Spanish coast, the Mediterranean, Suez Canal, Red Sea and East African coast.

Soil Drifting

There is no method of accurately measuring exact damage caused by soil drifting. It is estimated that one inch of surface soil blown from a single section of land means the movement of approximately 100,000 tons of soil. In Central Oklahoma, as a result of storms occurring in the high plains of the United States during March and April 1935, dust was deposited at an average rate of 82 pounds per acre.

Bats, although expert flyers, can neither glide nor sail.

SUNDAY SCHOOL LESSON

JULY 25

GOD PREPARES A PEOPLE

Golden text: The Lord thy God hath chosen thee to be a people for his own possession. Deuteronomy 7:6.
Lesson: Exodus 11:4—12:36.
Devotional reading: Psalm 68:1-7.

Explanations And Comments

The Struggle with Pharaoh, Exodus 11:1-10. The result of Moses' intervention with Pharaoh (our last lesson) was that Pharaoh ordered his servants to increase the burdens laid upon the Hebrews. Long hours of the struggle with Pharaoh. A series of plagues befell the Egyptians: plagues of water turned to blood, of frogs, of lice, of flies, of murrain of cattle, of boils, of hail, of locusts, of thick darkness. The recounting of these plagues covers five chapters in Exodus (7:14 to 12:30); read them and also the summary given in Psalm 78:44-51 and Psalm 105:28-36.

While each plague laid Pharaoh over to the Egyptians, the cumulative effect of the plagues was to harden his heart and refused permission, Dr. Scott-Adams calls our attention to the fact that the magnitude of the struggle and the titanic courage of Moses in the face of the wrath of the combatants and their resources: the incarnation of a might in which Egypt's colossal statues, palaces, temples, tombs; it is the monarch of such a land that Moses defies. The Egyptians were well matched. Pharaoh never yields an inch of ground, and Pharaoh yields but little. But it is a struggle right against might, of the unseen with the seen, and the unseen must prevail. The plagues grow more and more terrible; Pharaoh both entreaty and confession, even win from some of his court an acknowledgment of Jehovah's power. But at last in a climax of extraordinary magnitude Pharaoh rises like a giant, refuses the demand of Moses, and forbids him to leave Egypt. He looks upon his face again. Moses takes him at his word and leaves him, with a flash of anger on his face, after announcing the last terrible blow of the year to come.

Instructions for the Instituting of the Passover and of Unleavened Bread, Exodus 12:1-20. "This month (Abib) shall be unto you the beginning of months: it shall be the first month of the year to you."

Moses' instructions to the Elders of Israel, Exodus 12:21-23. Moses summoned all the elders of Israel, and said to them, "Select lambs for your families, and kill the passover victim." (Moffat's translation). Jewish tradition says that in the number of persons for one lamb.

They were then to take a bunch of hyssop, dip it in the basin in which the blood was caught when the lamb was slain, and strike the lintel and the doorposts of the house. The blood would be no safety outside the blood-sprinkled portal, and no one was to eat in the house before morning.

Moses then assured the people that Jehovah would pass through to smite the Egyptians, and when he saw the blood on the lintel he would not allow the destroyer to enter into the houses. Moses talked to them about the Lord's "passing" and "seeing" as if he had a form like a man; in this way only could he make them understand God's protecting care.

"On the night of the feast of the Passover was to be observed as an act of faith. The deliverance had already been accomplished. Ever since it has been a feast of commemoration. But on the first night, as much as on any anniversary, the deliverance was to be celebrated."

Will Boost Circulation

Fascist Party Members Must Subscribe To Mussolini's Newspaper

"All members of the Fascist party in Italy must subscribe to Mussolini's newspaper, the Popolo d'Italia, according to an order just promulgated by Gen. Starace, the party head. And the order was understood in Germany that all Nazis, too, indeed all Germans, must buy at least one copy of Hitler's paper, 'Mein Kampf.'"

Hitler does not need to receive money from the state. He can live well on his book royalties. Now Mussolini will have an even larger personal income from his newspaper.—Chicago Daily News.

Second-Hand Planes

Will Some Day Be As Common As
Second Hand Cars

Going to get a new plane? This how it is with an airplane, and that's how it was at Heston, where the first public auction of planes brought brisk upward bidding. The establishment of a second-hand market for potential pilots is the last thing needed to demonstrate how commonplace flying has become.

The day is coming when rows of machines neatly ticketed with their knock-out prices will be a familiar sight along the main roads.—Overseas Daily Mail.

Celluloid was discovered by a type-setter, named Hyatt, who was trying to find a cheap material for making billiard balls.

Chemical engineering can treat quicksands and quagmires so that they become capable of supporting heavy building structures.

THE CANADIAN ADVENTURE
TRIP OF BOB SIM, AN
ONTARIO FARM BOY

No. 6 of a Series of 16 Letters

Farier-vous Francs? Bob tried it—not so good: 300 bushels of potatoes means 300 bushels of interest. Bob, who had 1,000 people at church in a small Quebec village. He's on his way, getting knowledge every day along with a good sun-ban.

Riviere du Loup, Quebec. (Special despatch by Bob Sim).—Riviere du Loup, or as the English would say, Riviere du Loup, which pours its boiling waters into the mighty St. Lawrence, gives its name to a busy industrial town where I am spending the night. From where I sit, there is a splendid view of the St. Lawrence River which is over fifteen miles wide at this point. At this moment the sun is setting behind the blue hills of the north shore of the river.

To-morrow I will start west and south following the river, through diked miles to Kingston, Ontario. But the river does not end there; the St. Lawrence system which drains half a continent, goes north and west to Manitoba. For sheer size and the magnitude of its drainage must rival the world's greatest rivers.

Farwell to New Brunswick After crossing the Bay of Fundy last week I began to follow the St. John River which runs from the city of St. John inland almost to Quebec City. It is more beautiful than the St. Lawrence with its brilliant blue water. A gentleman who has traversed the continent declares that the St. John Valley is the most beautiful in America.

On the St. John I saw the Reversing Falls, but I did not see it. Verifying—if you know what I mean. That is, I saw the water running one way in the morning, but I did not actually see them reverse. These falls, which are a magnificent sight, are caused by the enormous tides.

Cemeteries are apparently less formidable here than in Ontario. St. John and Fredericton both have cemeteries in their downtowns. The stones on the very old graves are about six feet square, sitting like sentinels on the ground, about two feet from the ground. Passing the Fredericton cemetery at dusk I noticed a number of graves seated on one of these tomb stones recalled such an incident in one of the French novels I had read. I couldn't visualize it on any tomb stone I had ever seen then; however it is a fact. The French value as well as any expensive cemetery.

The Potato Country Potatoes are grown in the Upper St. John Valley not by the acre, but the dozen. The house grows around the plant, as much as two hundred acres. The high, well drained, with a light red soil, is a good growing place for potatoes. The farmers are so scientific, as the apple growers of the Annapolis Valley. By selection and breeding they have developed a superior potato, as well as a high yield. One hundred bushels to the acre was not a common feat of crop. With the use of sprays and fertilizers they now produce 300 bushels to the acre.

As a result the New Brunswick potato commands a higher price on the market than any other potato, as we know in Ontario to our sorrow. But they have the same problems as the farmers in the French section. Prices depend on export trade, tariffs, and foreign crops.

Farier-vous Francs?

What would you say, my friend, if you landed in a home where English was spoken? Yesterday I was walking down the road and a French habitué called me. He said, "I dressed going, but there was no alternative. We had a dreadful time understanding each other. I showed them on the map where I had bought the post cards I had bought. They had a little baby who was something one can admire in any language, so all in all it wasn't so bad."

To be think of the years we spend in High school studying French. Then we can't ask a fellow Canadian for a drink of water in his own tongue. I think French is badly taught. High school; they call it Parisian French, but I hope the Parisians don't hear about it. We must, if we hope to increase our friendship with Quebec, learn to appreciate their language and literature.

It is a thrilling thing to be in Quebec town on Sunday. There is one huge church at the centre, with hundreds of houses and small brick houses around the church. There were over a thousand at church in this small village. The village was not as a rule retire, but spend their whole life on the farm, living in old stone houses with big chimneys over the land. They have huge families, usually with one going into the ministry, and one to a convent, one or two taking up land, while the rest go to town. The French population is still growing, and it is estimated that they will equal the English sections in a few generations.

My first letter was written from my home in Ontario where plans will be made for the trip West. I am hoping to be able to visit the West, as Thumbing has its disadvantages.

Stranger: "I represent a society for the suppression of profanity. I want to take profanity entirely out of your life, and—"

Jones: "Hey, mother. Here's a man who wants to buy our car!"

Buckingham
FINE CUTWORLD HAPPENINGS
BRIEFLY TOLD

An actual deficit of \$1,178,243 during the fiscal year for Newfoundland was reported in the budget speech delivered by commissioner of finance and customs J. H. Penson.

Announcement was made that Premier Benito Mussolini had approved plans for the construction of Italy's greatest combined seaplane and airport at Genoa, costing \$6,000,000.

President David Toro of Bolivia has resigned and Col. German Busch, chief of the army general staff, immediately assumed the presidency. An official announcement said calm prevailed throughout the nation.

A Cossack trick-ride, dragged several yards when he fell from his horse at the Olympia Horse Show, kicked his foot free, threw a double somersault, sprang to attention and saluted the royal box.

Dr. J. W. McInosh, city medical officer of Vancouver, said federal and provincial health authorities were preparing to fight a threatened invasion of British Columbia, from the state of Washington, of the dread bubonic plague.

Notices have appeared at British airports warning air passengers not to take photographs for any purpose prejudicial to the safety or interest of the state while flying over the British Isles or British territorial waters."

"The Italian government has instructed newspapers that henceforth no edition must contain more than eight pages. This was said to be necessary because of the world scarcity of cellulose, which Italy must import at high prices.

The world's wheat crop will be from 20 to 30 per cent. greater this year than last. It was officially announced by the International Institute of Agriculture. Final figures will not be published until about the middle of August.

Tenders have been called for an issue of \$14,300,000 Canadian National Railway 10-year equipment trust certificates, bearing 2½ per cent interest. D. C. Grant, vice-president in charge of financing and accounting, announced.

What Makes Prosperity

War Scare Always Produces Boom
In World Trade

It is not a pleasant thought, but the fact is the present boom in world trade was started by the war scare, and is mainly sustained by it. Let the war clouds clear away, and commodity prices and security markets would slump overnight, for these are being supported by preparedness buying rather than by present consumer demand. The tragic fact is the world has not yet learned how to pull itself out of a depression of plenty except by creating a fear of scarcity. And nothing creates that fear so effectively as a threat of war.—Edmonton Bulletin.

About Butter Fat

The fat of milk is spoken of as butter fat, because it is from it that butter is made. Commercially, the fat is the most important constituent of milk, and although in whole milk the average is only between 3 and 4 per cent of the total, market milk is judged by the depth of the cream line or the amount of butter fat it contains.

Must Know The Lord's Prayer A lunch wagon owner of Kendallville, Indiana, refuses to give free meals to beggars unless they can recite the Lord's Prayer. But in the past five years he reports he's given handouts to more than 8,000 who have thus qualified.

The health of a tree may be diagnosed by taking its temperature and a record of the moisture in the trunk.

MAKE THIS MODEL AT HOME—
SLIM-LINE FROCK IS CHIC
AND DAINTY

By Anne Adams

One look at Pattern 4455 and you'll be convinced of Anne Adams' flair for turning the Matron out in something chic and slimming. What could be more appropriate for afternoons than this "charmer"? You'll find the graceful, flared sleeves a striking example of style and daintiness, while the bow-accented neckline, trim yokes, and slightly flared skirt are as smart as the pattern can be, in addition to being very easy to cut and stitch. Pattern 4455 will prove a "wardrobe standby" for your all-occasion wear, and a joy to behold made up in bright-hued sheer, soft synthetic, or a pretty, pastel shantung.

Pattern 4455 is available in women's sizes 34, 36, 38, 40, 42, 44, 46 and 48. Size 36 takes 4½ yards 39 inch fabric. Illustrated step-by-step sewing instructions included. Send twenty cents (20c) in coin or stamps (coin preferred) for this Anne Adams pattern. Write plainly Name, Address and Style Number, and send order to the Anne Adams Pattern Dept., Winnipeg Newspaper Union, 17, McDermott Ave. E., Winnipeg.

Extend Air Service

To Extend Mail Flights Between
Ottawa And Washington

Canadian and American state departments have reached an agreement for establishing an all-mail service between Ottawa and Washington, D.C., as soon as the trans-Canada air mail begins operation. The air mail and passenger service between the two national capitals will operate via Toronto and Buffalo, this will re-establish the air mail between those two large lake cities which was cut off in 1931, as well as facilitate a large and growing exchange of communication between the United States and Canadian capitals.

For Better View

To give an engineer better views of the track ahead of him a western railroad is experimenting with an oil burning freight locomotive that appears to run backward, the cab being placed at the front end of a train.

Electrical energy worth \$500 is contained in every flash of lightning, according to calculations of an expert.

Japan may broadcast the Olympic games of 1940 to 24 foreign countries.

Southern New Jersey was the centre of the glass industry for nearly a century from 1770.

THE YELLOW BRIAR

A Story of the Irish on the Canadian Countryside

By PATRICK SLATER

By arrangement with Thomas Allen, Publisher, Toronto.

CHAPTER VIII.—Continued

Bob finally tired of watching the antics of the excited heifer and the silly goings on of the man. He jumped up on Marshall and whined at him, invited him to exercise a little commensurate. Then he led the man in quite another direction and far off from the house there across the creek and over a little knoll, the excited heifer, chasing after him, saw the two brutes find her hidden calf.

Now, you apprehend, gentlemen, I am merely summing up the facts for your guidance; and from these facts you will draw your own conclusions. I am not suggesting that Bob thought the silly, little, soft-skinned calf would be safer in the farm stable than lying unprotected in a lonely bush. Neither am I suggesting that he was not aware of the fact that you find on this evidence that Bob wanted the calf at the home-stead because that would make it a simpler job for him to drive the mother up there twice daily. I do not say that Bob wanted the calf taken up at all, should he however point out to you that the uncontradicted evidence discloses that the dog showed unmistakable signs of excitement and interest in the eighty weight of young life across his shoulders, and gripping the soft legs, trudged homeward followed by the excited and wild-eyed mother. As I said before, I am merely summing up the facts for you.

It is, of course, merely a play of fancy to attribute to a dog the thoughts of the human mind. What the human loves really thinks of him is past any man's finding out; and next to that, comes the mystery of what is going on in the mind of his dog. The human cannot even know what sort of a world it is a dog thinks he is living in. The creature's concepts of time and space may be different from ours. Objects may have other color tones for him; and sounds that please human ears are often painfully distressing to a dog. Neither the master nor his dog can ever know the physical world save as thoughts floating on a stream of consciousness. If that world exists other than as thought, neither can they know anything about it; and since they cannot talk the matter over and compare notes, the dog and his man can never be quite sure their separate dream worlds are similar in kind to one another.

But a man does know and can understand the feelings and emotions of his dog. He knows, for instance, that the dog has a conscience, and is sorry for his sins. He knows that the dog of anything is a sin that displeases his master; and that in the dog's life such sins are usually committed because he does not understand. As with the dog, so with the human, sin is caused by lack of love or by ignorance.

Well, up on that Mono farm, time kept flying by; and by the spring of 1884, we had buried Old Hickory Mick, the Catholic school teacher. The Orange families in the section felt easier in mind, now that they had for master a good Protestant like Nathaniel Carson, who did not believe in a god at all. Meanwhile, Bob O'Neil Pitaligo had grown into an orderly and quiet dog. Once in awhile, he might go off for a day or two, to come back with the fatigue of love in his brown eyes; but the days of joyous play and romping

BLACKHEADS

Get two ounces of pure powder from your druggist. Sprinkle on a hot, wet cloth and rub the face gently. Every blackhead will be dissolved. The one safe, sure and simple way to remove blackheads. Have a Hollywood complexion.

were no more for Bob; nor for his boy, Charlie, who was now a sturdy, serious-minded lad of fourteen. They remained as great friends as ever, but neither saw any occasion for displaying feelings that were deepening with the passing years. Charlie had developed into a regular, thorough-going young farmer, much to his father's pride and joy; and Bob still brought the milk cows home.

Yes, time kept stepping away like dry sand through one's fingers. Rev. C. M. Clarke came to the Mono Wesleyan circuit to carry on what he called his parietal ministry. He was a well-educated young Englishman from the town of Bristol, full of enthusiasm and painstaking to a fault; but he was a greenhorn on the parish preaching appointment in Canada; and he was no horseman. He arrived at Mono Mills on foot; and the local Quarterly Board directed one of its brethren, Thomas Henderson, to secure the new minister a bay mare from a farmer down Sand Hill way. Several of the brethren had on occasions observed the shabby old mare standing untended on the village street, patiently awaiting her master's pleasure; and they all agreed she would make a reliable mount for the inexperienced young clergyman.

After powerful assurances had been given him, Rev. Mr. Clarke was hoisted into the saddle and set off on his way. The mare, sure, was faithful enough to be a mare; but she pulled up sedately at the first tavern door on the 6th line, and not a step farther would she budge for him until her rider had dismounted. In these days there was a tavern every mile or two on any road on which teaming was done. The indignant clergyman left his gift horse standing at the third tavern door and fared away stoutly on foot. Nor could he ever be induced to mount a saddle again on that road.

Throughout the year, there was a constant pressure of heavy work to be done on the Marshall farm. Even the floating field stones were turning into silver, as saleable grey lime, in these days there was a tavern every mile or two on any road on which teaming was done. The indignant clergyman left his gift horse standing at the third tavern door and fared away stoutly on foot. Nor could he ever be induced to mount a saddle again on that road.

One gets to know people well after living on the same farm with them for two years. Edwards was a quiet, spoken man, clean and tidy in his personal habits, and gentle with every creature about the place. The children liked him, and tagged after him in his work. His wife, in Mrs. Marshall's opinion, was a bit of a wet-witted; but she was a caution to work, and she did not talk back. Edwards, himself, was religiously minded in an emotional way. He made a practice of praying aloud; and he made special efforts that God would hear his prayers. As a devout, Primitive Methodist, he stoutly maintained we should have cold vigils on the Lord's Day, which always struck me as a curious notion for a hired man to have. I shall allude hereafter to his appearance; because he had the high-domed skull of Arthur, the Duke of Wellington. His principal worry in life seemed to be the bald spot that was spreading over the crown of his head. Above the hair there was the pig brains. To remedy it, he was using "Close-hug's Tricopherous", a sovereign, patent medicine for bald heads in those days, guaranteed to quicken the hair roots into active life and to grow a healthy swath after the third top.

Everybody about the place felt sorry the young couple were leaving. Sugar maws were turning the time Edwards was paid off, and the couple prepared to go on their way. Above the faded green of the late summer, patches of golden ochre and of brilliant crimson were showing on the wooded hillslopes. And, here and there, the frost had dashed the foliage of a spreading birch with the carmine of dark scarlet wine, which was fading at the edges into the rich brown of dead leaves idly fluttering down.

The night before they left neighbors dropped over to wish them speed; the respectable young couple

were well thought of in the little community. And you know the sort of thing it was. The men cracked their hats before the big fireplace, and the womanfolk amused themselves in their simple way. Hymns were sung and some victuals were served before the party broke up. Oh yes, Mrs. Edwards would write—she was one of those significant women—and tell the folk all about their trip.

It had been arranged that Charlie Marshall take the wagon and team, and give the Edwards a lift as far as Toxtown. And I wish you to know this was a mighty important affair in the eyes of young Charlie. He was being trusted with that valuable team of boys—all on his own, as you may say. It was taking some prodigious time for his grandpa at the Tavern Tyrone—a frisk of butter, hams and a few dressed chickens; and he might stay with her for a day or two. So he was all spruced up for the occasion. The harness had been oiled and the wagon well greased. Charlie's boots were shined to perfection; and Edwards had given him a dandy hair trim.

The party set off bright and early in the morning. They left with every one in the best of spirits, save Bob O'Neil Pitaligo. The dog had planned, of course, to go along; but, at the last moment, Mrs. Marshall played a dirty trick on him, and tied him up. But a wise dog knows it is a long time that has been turning, and he amused himself cracking seeds during the day, and consoled his soul in patience.

The time came for bringing the cows home for the evening milking. So, of course, they let Bob loose. But the dog's mind was not on the cows. He quietly trotted down the lane, and took the first turning to the left. Paddy was sent for the cows; and the milking was late.

At daybreak the next morning Bob was back scratching at the kitchen door. He looked a bit travel-worn; and his muzzle was stained. Marshall scolded the dog harshly.

"Oh! poor Bobbie! he" said the wife, "he is fretting for his lad."

In Danger Of Extinction

Unless Strict Regulations Observed
Whales Will Vanish From Seas

"The whale that wanders round the world," as Hittite Belphe has said, "is not a table fish. Would that it were; for whereas herrings and their like are thrust back into the ocean to maintain prices the whale, so popular is its oil, is in serious danger of extinction."

If the agreement reached between 11 governments interested in whaling is ratified, however, it should do a good deal to maintain the stock of whales. Of the three principal classifications of whales, the Right whale, which used to be hunted by the Basques in the Bay of Biscay, is already almost extinct; the monstrous-headed sperm whale, denizen of the tropical seas, is rare; and only the gigantic whale, or the blue whale, are the subjects of competitive harpooning between British and Norwegian companies in the Antarctic seas.

A Geneva convention ratified in 1935 forbade the killing of Right whales, of calf whales, and of immature bowwhales. (The cow whale is supposed to bear only one calf in two years.) The new agreement extends the prohibition to sperm whales and, most important, also fixes a nine months' close season for killing whales from the floating factories.

Last year, after a long and unfortunate dispute with Norway, the British whalers agreed to a three months' harpooning season, and it is obviously desirable that this should become permanent. Although Britain and Norway between them are responsible for four-fifths of the whales caught it is necessary that the other powers should come in, and it is probable since the efficiency and speed of harpooning and of extracting oil from whales grow that an agreed quota limiting the whale "output" should also be regularly arranged.

For unless whaling is strictly regulated this remarkable beast may soon join the white rhinoceros in oblivion. —Manchester Guardian.

Governor-Generalities

Always humorous Lord Tweedsmuir can be depended on for a spark of laughter when he speaks. Addressing a group of men at Kingston, Governor-General mentioned that he could not talk on subjects of political contention. He added he was hedged about in his speaking, saying: "In fact, I am confined to Governor-Generalities."

Found in the rivers and lakes of tropical America, the four-eyed minnow has an upper and lower set of eyes.

Very few parrots breed in captivity in the United States. 2213

Canada's Western Northland

Use Of Aircraft Makes Transportation And Exploration Less Difficult

"Canada's Western Northland," a companion publication to "Canada's Eastern Arctic," published in 1934, has just been issued by the Lands, Parks and Forests Branch of the Department of Mines and Resources. A most informative and interesting—even fascinating—booklet, it deals with the history, resources, population and administration of the mainland portion of the Northwest Territories and the more southwesterly islands of the Arctic Archipelago. These two reports bring up to date and correlate available information relating to Canada's Northland.

Canada's Arctic possessions are, geographically, divided by Nature into two parts—the Western Arctic, stretched from the Pacific ocean and down the Mackenzie river; and the Eastern Arctic to which access is gained from the Atlantic ocean and Hudson bay. Brought about by the ever-widening search for minerals and by the use of aircraft as a means of transportation and exploration, impressions of the Northwest Territories have undergone considerable change within the past twenty years. Once regarded as being almost inaccessible, many areas are now to-day reached by a highway, flying time of a number of cities and towns in Western Canada. In spite of the northern latitude, the Territories are not entirely regions of perpetual ice and snow. The winter is long and cold but, of course, they let Bob loose. But the dog's mind was not on the cows. He quietly trotted down the lane, and took the first turning to the left. Paddy was sent for the cows; and the milking was late.

At daybreak the next morning Bob was back scratching at the kitchen door. He looked a bit travel-worn; and his muzzle was stained. Marshall scolded the dog harshly.

There's No Safety In Numbers

Not Where Files Are Concerned Anyway

The number of flies that can trace their origin to one single female housed during the season runs into millions.

When you consider that each single one of this host is an individual carrier of the worst sort of filth, it must be obvious how important it is to combat this menace. Flies delight in feeding on unclean garbage, refuse, rotting animal and vegetable matter, horse manure, in fact, everything that is particularly obnoxious to us humans.

Think what may happen if one of the loathsome pests gets into a home and is left unmolested. The baby's bottle, even the sleeping baby's lips, and any food or drink left, are choice spots on which he will settle, leaving disease and even death in his wake.

What are we to do to fight this menace? Remove or protect all the breeding grounds we have mentioned and any others that may prove breeding grounds for flies, and keep doors and windows protected with adequate screens. Cover all food and drink at all times. And, to make assurance doubly sure, place some Wilson's Fly Pads around the house in every room. They attract the flies and kill them all very quickly.

By Any Other Name

At a prize breakfast given in San Jose, California, the suggestion was made that the prune should be renamed "Petite Pomme Noir d'Amour," or "Little Black Apple of Love." However, the growers think "Prune" would be sufficient.

Visits Home Of Ancestors

Prime Minister Mackenzie King Explores Old Manor House In Scotland

Mr. W. L. Mackenzie King, Prime Minister of Canada, was able recently to satisfy a life-long ambition. He traced the birthplace of his maternal grandfather to Ladyford, Tyrone, and had tea in the room in which probably that pioneer was christened. Before leaving, Mr. Mackenzie King was presented with a carved wooden chair which had come from the old church at Tyrone.

It was indeed a day that the Canadian Premier will look back upon with the happiest of memories. Again and again he expressed his delight as he examined the old manor house which was his grandfather's home before he went to Canada with the Royal Horse Artillery.

"It is a great pleasure to me to visit the home of my grandparents," he said. "I only wish my father could have been here along with me."

It was indeed by the happiest of coincidences that Mr. Mackenzie King was able to satisfy his lifelong wish. When he heard that he was to be offered the freedom of Aberdeen, he immediately wrote to Lady Aberdeen asking her to make some special inquiries as to the birthplace of his grandfather.

Lady Aberdeen got in touch with Mr. A. G. Brown, a former provost of Fraserburgh, who, after making an extensive search, discovered that it was at Ladyford that Mr. Mackenzie King's grandfather, Mr. John King, had spent his early days. It was a short time later that Mr. Brown received conclusive evidence from the Registrar General in Edinburgh that Ladyford had actually been the home of Mr. John King.

The Dominion Premier could hardly wait to visit the old place. He motored to the house, which was surrounded by a lovely garden descended on the surprised occupant, Mrs. Davidson, tenant of the farm of Ladyford, and for an hour Mr. Mackenzie King explored the building and its surroundings, being charmed by the old-world atmosphere of the place.

He was particularly interested in some old stone steps near the house which served as a mounting and dismounting place for ponies.

The building, which is at least 200 years old, is built very solidly of granite, and roofed with old Scots slate. A two-storey house with two side wings projecting forward, it has that substantial appearance typical of the old manor houses of Scotland.

It was in this house that Mr. King's grandfather was baptized on May 3, 1814, and when Mrs. Davidson, tenant of the farm of Ladyford, and for an hour Mr. Mackenzie King explored the building and its surroundings, being charmed by the old-world atmosphere of the place.

Turns To Scrap Iron

Britain Faced By Shortage For Arms Appeals To People

Confronted by the insatiable steel demands of the government's rearmament program and an acute shortage of raw materials, the British steel industry has been driven to imitate Germany and Italy in turning to barns and lumber-rooms for scrap iron. The British Iron and Steel Federation appealed to householders, farmers and manufacturers to sell their discarded cookers, stoves, broken pots and pans, farm implements and scrapped machinery.

Room Papered With Stamps

Stamp dealers and collectors in England spent a holiday at North Bersted studying the walls of a room pasted with thousands of stamps. The room was the private study of a collector who had spent his life in collecting stamps. The room was the private study of a collector who had spent his life in collecting stamps.

The South African government is co-operating with Britain in a defence scheme for Simons Town, naval port near Cape Town, in accordance with an agreement made in 1920.

There was a British novel, "General Die in Bed," but it wasn't translated into the Russian.

The moon never comes nearer the earth than about 221,000 miles.

Little Helps For This Week

He maketh me to lie down in green pastures. Psalm 23:2.

O the peace at the heart of nature. O the light that is not of day; Why seek it afar forever When it cannot be taken away!

What joy it should be for me to look up and see God's love in everything, to feel that the blue depths of the sky are a real canopy of blessing, the roof of the house of my Father. To know if clouds pass over it, it is just the unchangeable light they veil, and even when the day itself passes I shall see that the night itself only reveals new worlds of light. And to know if I could unwrap fold after fold of God's universe I should only find more and more blessings and see deeper and deeper into the love which is at the heart of it all.

Experiment With Trees

New Fast Growing Poplar Has Been Evolved In Canada

A new race of trees is being bred in Canada, D. A. Macdonald, assistant Dominion forester, reports. Experiments give promise of a new fast-growing, tough poplar tree specially suited to the needs of the paper and match industries.

For the past year or so Dr. C. H. Heimbauer, of the Dominion forestry service, who is described by fellow workers as one of the world's most eminent experts on forestry genetics, has been cross-breeding poplars to produce a tree combining the desirable characteristics of several species.

Encouraging results have been obtained, Mr. Macdonald said, with hybrids possessing the fast-growing qualities of the Carolina poplar and the toughness of certain European poplars.

The Carolina poplar reached maturity in 12 or 15 years, but is susceptible to rot at the centre. The slower growing European trees have the advantage of remaining firm throughout.

Just Changed Around

People Now Want Bathroom Bigger Than Kitchen

Builders of modern homes say there is a tendency to increase the size of bathroom, to provide more dressing space. With this, they add, goes a decrease in the size of kitchens, making them just big enough to include the essential mechanical equipment.

Once upon a time the kitchen was the centre of the home, the "Country Kitchen," written by Michigan-born Della Thompson Lutts, was a best-seller partly because it stirred the reader to remembrance of the old-fashioned kitchen, clean, warm and cozy, fragrant with the odors of cookery. —Detroit Free Press.

King Of The Arctic

Northern Trader, After Exciting Career, Has Announced His Retirement

Charles D. Brower, far north trader, who made and lost several fortunes, rescued scores of shipwrecked persons and aided polar explorations in an exciting career as "King of the Arctic," announced his retirement at 78 to "spend the rest of my life in play."

After 52 years in this northernmost American settlement, Brower expressed only one regret: "Civilization is crowding me out, and there is no farther north refuge."

Keeps Accurate Record

The United States is far advanced in the matter of keeping records and statistics. They have it down this fine: Every fourteen seconds there is a birth, a death every 22 seconds; an emigration every seven minutes and an immigration every 12 minutes. This results in an increase in population of one every 36 seconds.

The length of a groove on a 10-inch phonograph record is 550 feet to a side; the needle travels over an average of 37 inches a second.

Thousands of houses are being constructed in Greece.
